The Two Nature of Human Life

Gina Al ilmi

Our Natural Entity

&

Information Entity

Each one of us now, have 2 Life. The Natural Entity as the place we grow, the habitat where we lived, and the ecosystem of living being.

The second is The Information Entity that is circling around as infinite data. Even if we dont have account for social media or maybe we dont have any email account, we still living in this one world of information oceans, below the sky of data that are scarcely widened by more and more accounts we made, in many social media, information applications and softwares. .

How Our Two Worlds Grew & Developed

In the natural entity, our life grew with the consumption of grain, plants and meats.

At the same time, we are seeing the world being developed and technology created to be more advance.

The technology field then being separated into more precise functions. To make sure that the looping programatics doesn't create bugs and can withstands against any hacks and cracks.

The Internet world then being more guarded to ensure that it doesn't create any scrap products that can harming and easy to decipher.

How Our Two Worlds Grew & Developed

To ease our life as human. To make everything become more faster, and more valid and reliable, are the goals that are sets as objectives for many new information technology inventions.

As we breathe, the internet new type of artificial intelligence are calculating many things related to our personal and physical data's

Only minutes after the birth of the Alpha generations, valid information concerning our children has already being known from our record of maternal delivery in health facilitations such as hospital and wards.

Then after a week, the baby being born then are included in our national data recorded as new citizens of certain nations.

How Our Two Worlds Grew & Developed

Every government in developing countries has realized that each birth of an individual, are a big assets of the nations. They no longer seeing babies and geriatric citizen as nation burdens anymore.

We have to live with this same rules that all lives are valued. Even if the live of a baby only lasted few days, the birth of him or her, can create impacts and inspire many people.

It is from the story that we share on the Information World, the late babies can still have souls that are lived until infinity.

Even when we still forbid our children to use the internet, but they already has lived in the information worlds. From their medical records, their school records, and at other statistic for demographic studies,

How Our Two Worlds Grew & Developed

Before the High Tech Frontier industry are developed, human lives barely interconnect with another continent.

The first information that was transmitted globally was the news of the launching of rocket from the USA, that are sending satellite to the outer space.

Before the satellite era, there was only towers of radio broadcasting that using the far wavelength, and can only sending soundwave forms throughout the globe by using signal broadcast towers throughout the land.

How Our Two Worlds Grew & Developed

The world is now interconnected and becoming one global internet society. We even have our own global currency, and that is the many version of Crypto Currencies.

What's make us unite in this internet world is our same basic global principle to uphold Truth, Peace, and Justice.

We can see that many internet citizen behavior can be severely punished by the global internet users.

This virtual world has no governance over us. It just a place where numerous informations stored globally from piles of website data we visits. It even stored our chats and our emailing data's.

How Our Two Worlds Grew & Developed

This Virtual world are grown great globally and unites the earth citizens in one world wide web of network.

Before the High Tech Frontier industry are developed, human lives barely interconnect with another continent.

The first information that was transmitted globally was the news of the launching of rocket from the USA, that are sending satelite to the outer space.

Before the satellite era, there was only towers of radio broadcasting that using the far wavelength, and can only sending soundwave forms throughout the globe by using signal broadcast towers throughout the land.

The Choice of Disengage or Majorly Engage

The world wide web are open for any kind of data to be uploaded. There almost any rules are sets to govern the internet world globally.

There also not much rules that are sets concerning the protection of informations regarding the family and our privacy data's.

We then can find many people who tries to impersonate us in the internet.
