

A photograph of a large, diverse crowd of people walking along a city street. The crowd is dense, with individuals of various ages and ethnicities visible. In the background, there are trees and blurred city lights, suggesting an urban environment. The overall tone is slightly dim, with a focus on the human element of the scene.

# *The Informations Oceans*

The world consists of physicals and non physical materials or matters. In the age of information oceans, we are thriving in life solely based on our own capabilities at understanding the how and why the social cognitive working at around us.

By gaining the meaning, understanding the definition of social cognitive that are at large functioning in around us, can help us directly in advancing our line of businesses, our package of marketing, our steps in building political stances, and our efforts in doing every kind of social alignments.

Other than the above mentioned, Social Cognitive can also helps our professional plan, our businesses developments, our corporate management functions, our departmental efforts, and other means such as in public policies settings and national development planning.

The terms of understanding the social cognitive functions and social cognitive basic reasoning that are meta-socially shared in our environment, in our nations and in this little globe of eart, can help us in determining the best set of course that we aim to plan towards the lengthy future ahead.

Why is this possible? Gaining the basics of how our social world behaving at the cognitive level of functioning, can help us to maintain to stay above the level of the socially shared cognitions.

## *The Cognitive Realms*

The other objectives of setting our course in understanding Social Cognitive is to be progressively directing our own terms and premises in maintaining what needed to be done, what the priorities that should determined at first, before creating the structured piles of comprehensions that has been largely shared throughout histories.

Our cognitive realms are piled upon the matters of non-materials realities that happens in around us. At the parts of continent that has not been largely developed by technological advancement in the terms of information and educational fields, in instance.

At those places, many of the Social Cognitive active forms are being largely shared by means of social directive powers from traditional holds. This kind of primitive social cognitive are created by only several dimensions of social behaviours settings.

Many of these functions are formed by the set of beliefs, the unwritten normative rules, the underlying or saliently developed magnifications of imaginations settings that are scriptures in various social cognitive frameworks that are

schematically shared and written as primary historical tales that are passed through generations.

Many doesn't realize the salient magnitude powers of primary historical tales on the development of the social cognitive. Other than rigidly directed the societies on their basic forms on behaviour determinations and decisions making. These historical tales are also creating social cognitive perspectives that then accepted and being used as the basic settings on the conformity functions in the societies.

In examples, the Ramayan stories are making people that believes in the tales to always condescending to women. The tales of the round tables are then sets the societies into accepting infidelity as something that are common.

Then doesn't matter how many rules are being made, doesn't matter how advance the technology has been built. If the societies are still believing and still upholding their understanding or global views of the world, if only largely by the basic of these historical tales, then not much can be done.

# *The Occipital DNA*

At the books with the title Spiral Dynamics, written by Chris Cowan and Natasha Todorovic, they mention that the societies are formed through the continuous simultaneously shared cognitive comprehensions.

Each developed levels of DNA spinning evolutions conditions of the societies DNA are then determined the basic ways each societies are deciding their own ways on;

- decision making,
- on their social actions,
- barriers of behaviour limitations,
- terms of social priorities
- what considerably sets as important or not,
- progressive sets of public definitions of norms and rules
- their common sets of social attitudes/
- conformity forms of social intentions
- basic social sets of judgemental perspectives
- basic social sets of marketing interests
- basic acceptance of social conformities
- basic apprehensions of societies towards any social government course settings,

The different levels of spiral spins then furtherly forms the DNA of the Societies. When any societies has proceeded further, their common DNA functions has elevated and the whole societies are being ascend developed in their most

advanced sets of behaviours, set of cognitive abilities, and sets of shared normative rules in the societies.

Further reading, [Spiral Dynamics - Wikipedia](#)

The spiral dynamics was speaking about the global views, the holistic perspective that are largely used and actively functioning at the highest levels of DNA evolutions of the Spiral double helix protein sets.

The use of Social Cognitive basic perspective in understanding how our brain acting towards the societies based on the DNA Occipital functions other than viewing the environment by sensing and understanding of how their normally acts, talks, and perceived, there are also shared common understanding that are interactively interconnected and inter-forming the sets of shared information structures, the basic behaviour of the societies apprehensions towards the technological and science involves inside the environment of the social cognitive realms, and the basic ways the societies forms their simultaneous common behaviours.

Social Cognitive Flowcharts

## *Social Cognitive Aspects*

- Social Tools or Means of Social Actions;  
**Communications** / Interactions based on Information Campaign, Marketing Targeting, Use of Language, Arts & Entertainments, Social Media
- Social Grounds of Social **Actions**;  
Social Channels based on Active Actions at Public / Physical or Digital/ Dynamics areas.
- Social **Reasons** of Social Actions;  
Adversity / Activity; Behaviours, Attitudes, Critiques, Awareness, Public Interest,
- Social **Objective** of Social Actions;  
Social **Intelligence** / Agility based on Education & Information Funnelings
- Social Fronts or **Fortress** of Social Actions;  
**Manner** / Discipline based on Education & Information Funnelings
- Social **Transmissions/ Transformations** of Social Actions; **Responsiveness** / Repetitiveness based on Information Campaign, Marketing Targeting, Use of Language, Arts & Entertainments, Social Media
